## 450 Series Black Braided Light Weight Hose (suits 100, 150, 500, 550 & 880 series fittings)

The Aeroflow 450 Series hose is for performance and racing enthusiasts who want high quality light weight hose that is easier to assemble than traditional braided steel hose.

- Constructed with a braided nylon outer shield for abrasion resistance.
- A Flexible stainless steel inner core for superior strength embedded in the Chlorinated Polyethylene (CPE) synthetic rubber liner.
- For use with fuel systems, E85, E10, methanol, oils, lubricants, coolant systems and vacuum applications.
- Minimum temperature -40°C, Maximum temperature 150°C.

**Note.** Recommended for pump fuel. Due to the use of unknown additives in some fuels, we are unable to guarantee our rubber hoses compatibility with all fuels. We recommend the use of Aeroflows PTFE series hose for all race blend fuels.

**NOT RECOMMENDED FOR:** Brake systems, transmissions, power steering, extreme heat areas and use inside passenger compartments (due to permeation). For these applications use 200 Series Hose

## ALUMINIUM & STAINLESS STEEL HARD LINE

Aeroflow offer both aluminium and stainless steel hard line in many different sizes. All sizes are also available in different finishes including black anodised finish for use in high corrosion resistance applications such as E85 and alcohol fuels.

**For fittings to suit Hard Line see page 130**

Anodised for E85 & Methanol applications.

Note: Black coating may appear to flake on tight radius bends, this has no effect on the integrity and corrosion resistance of the aluminium line.

ULTIMATE LIGHT WEIGHT HOSE TECHNOLOGY

## KRYPTALON® ULTRA-LIGHT FLEXIBLE KEVLAR BRAIDED HOSE

Aeroflow's new Kryptalon® series ultra-light flexible Teflon® kevlar braided hose & billet big-bore lightweight fittings have been engineered for extreme racing conditions, where every gram counts and reliability is king. Aeroflow's lightest hose combines a woven Kevlar braid with an internal smooth bore Teflon liner for greater flow capacity, with a convoluted outer for astonishing flexibility. It also has significantly higher flow and pressure ratings than conventional convoluted Teflon hose.

Aeroflow's new Kryptalon® Series smooth bore design eradicates boundary layer entrapment and flow disruption for performance you can count on! The Teflon liner hose has a large range of applications, fuels including Nitromethane, E85, E10, methanol, oils, lubricants, coolant systems. Available in -4 to -16 sizes in 1, 2, 3, 4.5, 6, 15 and 30 metre lengths. For a clean cut, you must use Aeroflow's Non-Stick Cutting Film (AF98-2049). Simply use Aeroflow alloy wrenches to assemble NO special tools are required. Kryptalon hose & fittings have been developed to flow more, be lighter and excel in hard core performance environments but are still easily assembled in your garage or at the track.

## KRYPTALON® LIGHT WEIGHT ONE PIECE SWIVEL HOSE ENDS FACTS

Aeroflow's newest hose ends to our range uses a unique compression style olive. You simply slide the socket over our Kryptalon® hose and push the olive over the TOP of the hose and Kevlar. No more trying to separate the braid from the Teflon. This not only saves time but leaves a perfect leak proof fitment every time. The unique designed Olive is compressed by the taper on the inside of the socket end as it's tightened. The Teflon is compressed into the slots of the fitting, forming multiple sealing surfaces like tiny O-Rings. This allows for maximum burst pressure.

## KRYPTALON® ASSEMBLY INSTRUCTIONS

1. Measure desired hose length and wrap tightly with Aeroflow's non-stick cutting film, (part # AF98-2049), allowing at least 3 full rotations of the non-stick film.

2. Cut through the centre of non-stick film while ensuring that you cut the hose at a 90 degree angle using Aeroflow cutters, (part # AF98-2052), or alternatively you can use a sharp box cutting knife being careful not to fray the Kevlar braid.

3. Carefully slide the socket nut over the hose while keeping the non-stick film on the end of the hose.

4. Carefully slide the olive onto the end of the hose ensuring that the slots in the olive face towards the socket nut.

5. Carefully slide olive past non-stick film then remove the non-stick film and slide olive back up to the end of the hose. Apply a small amount of Aero-Seal (part # AF98-2023), onto the male thread of the Kryptalon® hose end and screw the socket nut onto the Kryptalon® hose end.

6. Secure the hose end socket using Aeroflow vice jaws (part # AF98-2001 or AF98-2002) or by using an Aeroflow aluminium wrench (part # AF98-2003 or AF98-2039). Tighten the Kryptalon® hose end clockwise until the socket nut is tight, ensuring the correct crush of the olive onto the hose. You should notice that the male thread of the fitting is not showing, covered by the socket nut.

ULTIMATE LIGHT WEIGHT HOSE TECHNOLOGY

## KRYPTALON® LIGHT WEIGHT ONE PIECE SWIVEL HOSE ENDS

Aeroflow engineers have developed an innovative lightweight reusable 360° swivel hose end to work with our Kryptalon® ultra-light weight flexible kevlar hose. One piece design allows for uninterrupted flow and eliminates the extra leak points of braided multi piece fittings. Made from 6061 T6 aluminium and then hard anodised for durability, they are designed for serious racing applications where light weight is a priority but are equally at home in any application. Designed to work with the large bore of our Kryptalon® hose they have a greater flow rate than standard Teflon hose ends, giving you the best of both worlds, improved flow and light weight. Proven under the rigors of Nitro drag racing, there's no better choice when lightweight and reliability are required. Extremely easy to assemble, no special tools required. Available in black or titanium hard anodised finish.

**Note:** See fitting instructions on page 21

## 500 Series Cutter Style Swivel Hose Ends (suits 100 & 450 series hose)

Aeroflow's 500 series cutter fittings are a braised full flow fitting. The billet cutter end separates the wire braid for maximum hose retention, sealing the hose for a second time, which provides a greater sealing area for strength and easier assembly. All angles are mandrel bent, eliminating sharp changes in direction for optimum flow. Aeroflow's 500 Series fittings have a swivel head to allow for easy adjustment making them an excellent choice for the automotive enthusiast for use in fuel systems, cooling systems, vacuum applications and oil systems.

Compatible hose: 100 Series S/S braid, 450 Series Lightweight Nylon braid

- Not compatible for power steering and automatic transmission line applications.
- Hard Anodised (excluding silver)

### Panel Filters

### AeroFlow Air Filter Cleaning and Maintenance Instructions

#### Step 1

Carefully use a soft brush to brush off any excess dust and dirt from filter. Spray AeroFlow Air Filter Cleaner across both sides of the filter and allow to soak for 10-15 minutes.

#### Step 2

Rinse filter with water from the inside until the water runs clear through the filter. Use low pressure water for best results. Make sure dirt is flushed out of the filter and rinse until all traces of the cleaner is gone. Using high pressure will damage the filter.

#### Step 3

Shake off excess water and allow filter to dry naturally for 6-8 hours. **DO NOT BLOW DRY FILTER.** Be sure to not apply any oil until the filter is completely dry.

#### Step 4

Spray AeroFlow Air Filter Oil evenly across the filter until completely covered with oil. Be sure to oil across each filter pleat spraying from about 2-3" away. Do not over oil as **TOO MUCH OIL** can affect the MAF sensor.

## ENGINE OIL FILTERS

Aeroflow oil filters have been designed to incorporate all the latest technology to provide great filtration with minimal restriction so that your engine performs at its best with great protection. Aeroflow filters use an improved coil spring design to replace the commonly used "leaf" style spring and incorporate CNC machined thread for a precise fit. An Ultra high-Temp silicone anti-drain back valve in some models helps to prevent dry starts increasing engine life. An extra-thick backing plate and housing offers superior strength and pressure fatigue resistance which provides added protection against pressure surges in racing applications, construction also includes a hi-flow heavy duty base plate that features a fully tucked double seam. Aeroflow oil filters use a Buna-N rubber gasket which is compatible with most racing fuels and lubricants. 24mm - 15/16" hex release nut allows simple and easy removal and incorporates a hole for use with lock wire. Aeroflow oil filters use a premium pleated synthetic blend media provides increased filtration at high flow rates with minimal pressure drop as well as a perforated centre tube that allows more flow area & eliminates media wear during pleat movement.

### SUPER OIL PANS

Aeroflow's range of super oil pans available for most popular V8 engines are the perfect choice for street or track driven high performance engines. These pans start out as new stamped steel pans which are customised with specially designed extra oil capacity wings. These wings allow extra oil capacity without affecting ground clearance which helps maintain more constant oil temperatures for reliability and feature windage trays and crank scrapers. Oil pick-ups are supplied for conversion pans where the factory style pick-up will not work. Available in black finish.

**NOTE: Pickups are NOT included with pans.**

## LIGHT WEIGHT MORSE CABLES & ACCESSORIES

Aeroflow's Lightweight Black cables are the perfect choice for positive load transfer with negligible lost motion. Requiring very little effort, these cables allow for 3" of travel and are ideal for any cable operated application requiring either pulling or pushing. Aeroflow's lightweight, positive, smooth operating cables are fitted with effective dynamic seals, making them well suited for use in extreme environments. A complete circle of reinforcement wires support and protect the Teflon® inner liner, ensuring negligible deflection during cable operation.

Aeroflow's Lightweight black cables are assembled with a stainless steel solid wire core. For proper fitment, Aeroflow's lightweight cables are available in many different lengths and are available in "clip-clip style" and "clip-threaded bulkhead" mounting options. A considerable selection of quality mounting hardware for correct installation is also available.

## Breather Adapters

Fabricated covers have an ORB port in the end of the covers for adapting breather hoses to catch cans. To run a filter in the top of the covers in a traditional style you can simply remove the filler cap and screw in a Aeroflow breather adapter. This will allow you to either use a push on or screw on breather.

## V-BAND CLAMPS

Aeroflow V-Band kits are available in 6061-T6 aluminium, mild steel or 316 stainless steel weld flanges and a stainless steel clamp. New self-aligning V design. The weld flanges have been designed with a male to female connection which not only helps align the bands but also provides multiple sealing surfaces which prevent leaks and warping. Mild steel weld flanges are plated in high lustre weld through coating to help prevent rust and corrosion. Aeroflow V-band clamps utilised a special designed stainless locking nut which does not melt or loosen with the high exhaust temperature like the inferior Nyloc nut.

#### Recommendations

For water and coolant you can use any of the hose ranges. Must use clamps on the 400 Series rubber hose. Replace hoses if engine temp rises over 100°C (212°F)

For engine oil minimum 100 or 450 series hose is recommended, 200 & 250 series are recommended for racing applications.

For Transmissions and power steering, 200 or 250 series teflon hose must be used.

## HOSE INSTALLATION KIT INSTRUCTIONS (for -4 to -12 100 & 150 series Hose Ends)

Until now a purpose-built tool for the connection of braided steel hose and fittings has been lacking from the automotive market. Installation was performed manually, something that was difficult, labour intensive and risked injury. Due to demands in the high performance and automotive industry, Aeroflow's purpose built Hose Installation Kit solves these problems.

Unlike other kits on the market, Aeroflow's Hose Installation Kit incorporates a flexible design making it easy to assemble as well as making the replacement of parts simple. Made of aluminium, steel and iron to prevent corrosion, Aeroflow's Hose Installation Kit is made to last. It also comes in a convenient carry case for easy transportation.

Release the hose clamp assembly by releasing the thumbscrews. Slide the socket nut holder open.

Slide the cover back and slide the socket nut insert into the tool and the hose clamp inserts into the holder.

Place the socket nut into the tool holder and the hose into the hose clamp. Place the nut into the nut clamping mechanism and slide the cover closed.

Place the stainless steel braided hose into the hose clamping mechanism and tighten the two screws to hold it in place.

With the cover closed and the hose held in place begin rotating the wheel until it cannot rotate any further. Measure depth of nut to prevent overthreading.

To transform the AeroFlow Hose Installation Kit from an installation tool to a vice simply slide the hose clamp and handwheel assembly off the base.

Unscrew the socket nut holder and screw on the vice adaptor.

Slide the two vice-jaw pieces onto the base of the assembly. Slide the handwheel assembly out and slide back into the groove of the vice piece.

## 100 SERIES ASSEMBLY INSTRUCTIONS

Wrap masking or electrical tape tightly around the hose to prevent fraying and cut with hose cutters for best results.

Mark the hose with a felt pen to detect any movement while the assembly process is completed.

Place the socket in a vice, remove the tape from the hose and push it into the nut while twisting the hose. AeroFlow's soft jaw vice adapters (inset) are recommended to prevent damage to fittings.

Lubricate the threads on the hose and nipple with Aeroseal and place the nipple in a vice.

Holding the hose, push the socket nut onto the nipple thread.

Tighten the fitting until the socket has a gap of approximately 1.5mm. Check that the mark on the hose has not moved from the end of the socket nut.

## 200 SERIES ASSEMBLY INSTRUCTIONS

Using hose cutters cut the braided hose to the required length by wrapping masking or electrical tape around it to prevent fraying. Trim the hose of any stray braid to form a clean cut (inset).

Thread the socket through the hose with the threaded end of the socket towards the cut end and push it back.

Insert the olive between the braid and the Teflon® tube making sure none of the braid is trapped between the Teflon and the olive.

Push the olive into the braid using an olive tool or a hard surface ensuring the olive has been inserted square.

Push the hose back onto the nipple. Using Aeroseal, lubricate the nipple and start threading the socket onto the nipple threads tightening hard.

Place the socket in the vice to complete the tightening process. Ensure the gap between the nipple and the socket is no bigger than approximately 1mm.

Note: Teflon is a registered trademark of Du Pont

## 400 SERIES ASSEMBLY INSTRUCTIONS

Cut the hose square with a hose cutter or sharp knife.

Lubricate both the inside of the hose and the outside of the nipple using Aeroseal. Clamp the fitting into a vice.

Push the hose end into the barb until it fits snugly under the collar.

## KRYPTALON® ASSEMBLY INSTRUCTIONS

1. Measure desired hose length and wrap tightly with AeroFlow's non-stick cutting film, (part # AF98-2049), allowing at least 3 full rotations of the non-stick film.

2. Cut through the center of non-stick film while ensuring that you cut the hose at a 90 degree angle using AeroFlow cutters, (part # AF98-2052), or alternatively you can use a box cutting knife being careful not to fray the Kevlar braid.

3. Carefully slide the socket nut over the hose while keeping the non-stick film on the end of the hose.

4. Carefully slide the olive onto the end of the hose ensuring that the slots in the olive face towards the socket nut.

5. Carefully slide olive passed non-stick film then remove the non-stick film and slide olive back up to end of hose. Apply a small amount of Aero-Seal (part # AF98-2023), onto the male thread of the Kryptalon® hose end and screw the socket nut onto the Kryptalon® hose end.

6. Secure the hose end socket using AeroFlow vice jaws (part # AF98-2001 or AF98-2002) or by using an AeroFlow aluminium wrench (part # AF98-2003 or AF98-2039). Tighten the Kryptalon® hose end clockwise until the socket nut is tight, ensuring the correct crush of the olive onto the hose. You should notice that the male thread of the fitting is not showing, covered by the socket nut.
